HTML
CSS
JavaScript
React
Angular
Bootstrap
Handlebars

BACK END

Django
Python
SQL
MongoDB
Redis
C#
Extra:
Java
Docker

Education**Carolina Code School**

Graduated April 2, 2021

This course prepared me to be an entry level full stack web developer. It taught best practices, like PEP-8 for Python and some of the more common technologies available.

Associates in Science Greenville Technical College

Graduated March, 2020

The degree required a mix of mathematics and science courses.

Self-Taught Developer

I first picked up programming in 2001 as a hobby I did from time to time, I taught myself the basics of web development through books, Udemy and other sources. I started off trying C++ and Java, but wound up with C# as a primary focus. I also taught myself some of the basics of HTML, CSS, and JavaScript. I liked to try out new languages and frameworks as they came up. I also continue to learn on my own.

Experience**City of Greenville Parking Services (2001 – 2018)**

Provided customer service to patrons in city parking garages and special event locations

Received and deposited cash and digital payments

Directed and guided vehicles high traffic areas

Volunteer

I volunteer for Meals on Wheels once a week. I started in 2012.
